Quarterly Activity and Data Report Executive Summary Quarter 4 2020

The Racial and Identity Profiling Act of 2015 (AB953) took effect on January 1, 2016 and requires California law enforcement agencies to collect and report data to the Office of the California Attorney General. The requirements of Assembly Bill 953 include reporting on any complaints alleging racial or identity profiling and detailed demographic data for traffic and pedestrian stops.

In 2016 the City and County of San Francisco also passed local legislation to support the police reform efforts of the San Francisco Police Department (SFPD). The Board of Supervisors (BOS) voted unanimously an ordinance that established Administrative Code Sec. 96A (Law Enforcement Reporting Requirements) and specified reporting requirements for the San Francisco Police Department (SFPD). The Quarterly Activity and Data Report (QADR) (previously named the “96a report”) was developed to meet the quarterly reporting requirements and includes data pertaining to stops, searches, arrests, use of force and alleged bias-related complaints.

The data presented in this report can be used to evaluate the effectiveness of current police reforms undertaken by the SFPD. The information is also utilized internally to identify areas of disproportionate contact and to inform and improve policies, training, and tactics in policing.

As a part of SFPD’s ongoing commitment to delivering on one of its major organizational values Safety with Respect, advancing reforms, and increasing trust and transparency, the Department intends on conducting an in-depth quantitative analysis, with rotating scope and topic, every quarter. The report presented herein fully complies and satisfies the requirements set forth by the Administrative Code Sec. 96A: Law Enforcement Reporting Requirements. Please see the ‘Legislation & Methodology’ section for legislative activity and policy updates that may impact reporting criteria during any given period.

The principal data included in this report covers the time between October 1, 2020 – December 31, 2020.

The questions of discrimination and racial bias have been well documented over the years and prevalent across different domains such as employment, education, healthcare and criminal justice, including policing. Statistics continue to show the racial disparities in which people of color, particularly Black males, are overrepresented throughout our criminal justice system. Bias remains an institutional issue but various studies suggest that some of these disparities can be attributed to implicit biases or discriminatory stereotypes

To address the issue of bias policing, many agencies, including the San Francisco Police Department (SFPD), are being proactive and are analyzing and changing policies, training, and tactical interactions. Social psychologists have emphasized that bias can only be successfully mitigated if new interventions incorporate a fundamental understanding of implicit bias and provide a foundation on how to recognize and manage such bias so that they do not influence police officers and their behaviors.

The SFPD recognizes implicit and explicit bias are segments of discriminatory practices that should not be tolerable in any institution. The QADR report is a tool for the department that highlights critical areas that must be addressed to end any form of racial disparity. The SFPD is fully committed to implement a vision of bias free policing and strives to eradicate any form of racism.

WHAT IS IMPLICIT BIAS?

Implicit biases are the attitudes or stereotypes that affect our understanding, actions, decisions, and judgements in an unconscious manner. Science proves that bias, whether positive or negative, is part of the human experience and result from how the brain processes, stores, and recalls information. The brain builds mental associations based on our cultural environment and life experiences to form expectations about what is going to happen next. Some of those expectations become reinforced over time and ultimately influence our behaviors and decision-making in pro-social or anti-social interactions (Eberhardt, Goff, Purdie, Davies, 2004).

When individuals encounter circumstances that are stressful and unfamiliar, the brain may trigger negative emotional responses which can lead to unwanted negative bias. In tests, scientists can see our brains reacting positively or negatively to the different images from the environment around us. Such studies have demonstrated that simply seeing someone's face/ethnicity can stimulate thoughts, emotions, and conceptual associations (Payne, Cheng, Govorun, and Steward 2005). Dr. Jennifer Eberhardt, a

Social Psychologist at Stanford University, suggests that these associations are bidirectional, indicating that various thoughts, emotions, and concepts are often associated to ethnicity and race. While mental mapping is essential to the human experience, implicit bias studies have demonstrated a societal problem of correlating race and crime together (*Eberhardt, Goff, Purdie, Davies, 2004*).

Most police officers are dedicated to their profession, protecting the communities in which they live and work, and try to perform their jobs fairly without allowing bias to affect their actions; however, when operating under stressful and ambiguous circumstances they may be more susceptible to stereotype-biased judgements. With limited time to make decisions and react, the mental associations linking social groups and concepts (e.g. Black individuals and other people of color with violence and crime) are likely to influence their actions. Over time this can lead to a racial disparity for rates of stops, searches, arrests, and use of force.

Bias, explicit and implicit, is a symptom and a direct product of institutional racism. Yet, bias solely focused on the prejudice behavior of one thing, person or group compared to another that usually produces inequitable results; and it may be performed by anyone regardless of their race or class. Bias is very difficult to measure yet the variables of recognizing forms of implicit and explicit bias provide opportunities to address areas of change and strive in eliminating racism.

INTERVENTIONS

Dr. Lori Fridell, author of “Producing Bias-Free Policing: A Science-Based Approach”, states “Because police are human, they have biases; because they have biases, every agency needs to be proactive in producing bias-free policing.” Research has provided great insight into the causes of biased policing, and although most intervention programs lack the evidence needed to prove their effectiveness and sustainability, social psychologists encourage law enforcement agencies to engage in the interventions below:

1. **Training Officers-** Many law enforcement agencies now provide trainings on concepts that include racial/implicit bias, community-oriented policing, and cultural competence. This is the most feasible intervention, however, there is little evidence to support the effectiveness of such programs and they are not systematically evaluated (Paluck & Green, 2009). In addition to training required

for all City employees, SFPD implemented mandatory training for topics including: Implicit Bias, Procedural Justice/Principled Policing, Critical Mindset and Coordinated Response (CMCR), and Crisis Intervention Training (CIT).

2. **Policy Changes to Reduce Discretion-** Policies can be changed to reduce the amount of discretion officers have in their decisions involving civilians. This intervention reduces the probability that stereotypes will influence officers' behaviors
3. **Intergroup Contact-** One of the most feasible, effective interventions is to engage in non-negative contact with members of other ethnic groups (i.e., developing affinity through familiarity). Recent findings of intergroup studies suggest that meeting the four following criteria leads to the greatest reduction in bias: equal status between the two groups, common goals, intergroup cooperation, and support of the authorities. These factors (along with institutional support in the form of structured programming) will reduce racial bias and improve community relations (Pettigrew & Troop, 2006).
4. **Collecting Data and Adopting New Technology-** Collecting data on civilian stops and use of force with subject demographics allows law enforcement leaders to have more robust data to help understand the scope of bias within their departments. This intervention has become more prevalent within recent years but there are still challenges with how the data is being analyzed (Glaser, Spencer, Charbonneau, 2016).
5. **Stereotype Replacement-** The practice of identifying responses that are based on stereotypes and reflecting on why it occurred and replacing it with an unbiased response.
6. **Banning Racial Profiling-** Most agencies have explicitly banned racial profiling but this is hard to enforce and may also be ineffective, as officers may still engage in this behavior. The Department has long had a best-practice policy that prohibited biased policing and has sent an even further improved policy, developed with input from community stakeholders, to the Police Commission for consideration.
7. **Individuation-** The process of learning specific information about your colleagues and friends of a different ethnic group. This prevents stereotypic assumptions and enables positive associations based on personal relationships.
8. **Diversifying Police Force-** Having a diverse department can help strengthen community relations and promote individuation. Diversity does not only refer to

race and gender, it includes other characteristics such as religion, language, sexual orientation, and cultural background.

9. **Rotating Police Assignments-** This process would provide officers with more opportunities to interact and develop relationships with members of the community who come from different racial and cultural backgrounds.

With all of these efforts in place for several years in the San Francisco Police Department, several indicators have emerged suggesting that improvements have been made since the SFPD was reviewed by the United States Department of Justice.

- I. Since the 1st quarter of 2016, total uses of force have decreased by 65% (952 to 355). More specifically, pointing of a firearm has decreased by 75% (648 to 160).
- II. When the USDOJ reviewed SFPD, they found that search rates among Black individuals were much higher than White individuals, while the yield rates from these searches were much lower for Black individuals than White individuals. As shown by data contained in this report, this is no longer true (pg33). SFPD is encouraged by this as an indicator that officers are relying on behaviors of those they interact with to determine the type and level of enforcement necessary. SFPD believes that the training and policies, and resulting increased awareness, has driven these results.
- III. Continued incremental reductions in the representation of Black individuals among those stopped, searched, arrested, and in which force was used against them.

The San Francisco Police Department will continue to take the necessary steps to address the issue of biased policing. SFPD understands that implementing interventions will increase awareness and result in a substantial reduction of the effects of implicit bias and ultimately strive to end racism and discrimination throughout our workforce. As leadership continues to re-evaluate policies and seek new, innovative ways to better serve our diverse communities, we look forward to building new partnerships with experts in the field so that we can develop a better understanding of this ongoing issue.

The San Francisco Police Department began tracking and reporting use of force and stop data in 2016 as required by the passing of the local ordinance establishing Administrative Code Chapter 96A. In 2018, the local reporting requirements were changed to align with those of the State mandated under Assembly Bill 953, the Racial and Identity Profiling Act of 2015. At that time, SFPD adjusted data collection practices and reporting guidelines to meet these requirements. The legislative efforts listed below are included as they directly relate to information in this report.

The California State Legislature adjourned for the year on August 31, 2020. Governor Newsom approved a number of police reform bills listed below which have become state law as of January 1, 2021:

1. **Carotid Restraint Ban (AB-1196):** It is now illegal for law enforcement officers to use a carotid artery restraint tactic to forcibly detain a suspect. SFPD banned the use of this tactic in 2016 when the Use of Force policy was updated (DGO 5.01).
2. **Psychological Evaluations (AB-846):** This new law requires psychological evaluations/screenings of peace officers to include bias against race or ethnicity, gender, nationality, religion, disability, or sexual orientation.
3. **Length of Probation (AB-1950):** The California State Penal Code was amended to limit adult probation to a maximum of one year for misdemeanor offenses and two years for felony offenses

In October of Q4-2020, the City and County of San Francisco saw a decrease in the number of COVID-19 cases and advanced into the yellow tier of California COVID reopening plan phases, which is the least restrictive state category. Certain facilities were allowed to re-open and businesses were able to expand capacity. However, just weeks later the City moved back to the state’s purple tier and faced tighter restrictions in outdoor activities and non-essential offices. On December 3, 2020, California Governor Gavin Newsom had issued a new Stay at Home Order¹ restricting travel and activities with exception to essential tasks. This Health Order remains in place and, as a result, the San Francisco Police Department has continued to see an overall decline in stops, searches, crimes, arrests, and calls for service in Q4-2020. The year-over-year comparisons using 2020 data will show the effects of the COVID-19 related shelter in place orders.

SUSPECTS OBSERVED AND REPORTED

The suspect information provided includes descriptions that are generated by members of the public or observed by department members, and documented in police incident reports.

SUSPECTS by Race/Ethnicity					
October 1, 2020 - December 31, 2020					
DESCRIPTION	Oct	Nov	Dec	Q4 2020	% of Total Suspects Q4 2020
Asian/ Pacific Islander	118	93	81	292	4.2%
Black/ African American	959	941	952	2852	40.9%
Hispanic/ Latino	415	335	377	1127	16.2%
Native American	8	13	3	24	0.3%
White	487	429	471	1387	19.9%
Others	405	460	419	1284	18.4%
Total	2,392	2,271	2,303	6,966	100.00%

Total suspects observed and reported in Q4 2020 (6,966) declined by 22% from Q3 2020 (8,913). Black/ (40.9%) and White (19.9%) accounted for approximately 61% of all suspects observed and reported in Q4-2020.

Note: Subject data is extracted from incident reports via the Person Schema of Crime Data Warehouse via Business Intelligence tools. Search criteria includes results in which Person Type = "Suspect." Records with Unknown Race/Ethnicity data are not included.

SEARCHES BY LEVEL OF DISCRETION

Starting in Q4, 2020, the Department has renamed search categories to match the RIPA search yield rate methodology. The renaming did not change the contents of any category.

SFPD classifies the various types of searches into three categories: consent only searches, supervision searches, and other searches. Consent only searches require an officer to ask and receive

consent to search. In such cases, officers have the most flexibility in determining who to search, and include only those occurrences where consent is the only basis provided. Supervision searches include those that occur as a result of a search warrant, arrest or vehicle inventory. Other searches have a variable range of discretion and include reasons such as officer safety, suspected weapons, visible contraband, evidence of crime, etc.

Consent Only Searches	Supervision Searches*	Other Searches
<ul style="list-style-type: none"> ▫ Consent given 	<ul style="list-style-type: none"> ▫ Search warrant ▫ Incident to arrest ▫ Vehicle Inventory 	<ul style="list-style-type: none"> ▫ Officer safety/safety of others ▫ Suspected weapons ▫ Visible Contraband ▫ Odor of contraband ▫ Canine detection ▫ Evidence of crime ▫ Emergency ▫ Suspected violation of school policy ▫ Condition of parole/probation/ PRCS/ mandatory supervision

“Consent only searches” have decreased 56% overall since Q4-2019.

Supervision searches have decreased by 49% overall since Q4-2019.

“Other searches” have decreased 66% overall since Q3-2019.

The Center for Policing Equity notes:

...disproportionate searches and lower yield rates are an indicator of a greater burden of police contact relative to other groups and may suggest that officers' suspicion of illegal activity is less likely to be accurate for a particular group, or it may reflect that officers use a lower threshold of suspicion for the group. A lower threshold refers to the possibility that officers interpret behaviors as suspicious more often when the person engaging in that behavior is a member of a given group than when the person engaging in that behavior is a member of another group.²

The SFPD continues to conduct searches at a higher rate on Black/African American residents in San Francisco (see page 36), however, this disparity has reduced over time. (see page 40)

Average yield rate disparity has also reduced over time. Data since 2018 shows a significant narrowing or elimination of that disparity, with yield rates for Black residents and White residents within 4 percentage points of each other over the past 2.5 years.

² The Science of Justice San Francisco Police Department National Justice Database City Report August 2020, Goff, et al, pg21
<https://sfgov.org/policecommission/sites/default/files/Documents/PoliceCommission/PoliceCommission021021-CPE-SFPD-Report-Final.pdf>

Yield rate differences between White and Black demographic groups remain within 4 percentage points since 2019 for consent searches. We are unable to conduct an analysis prior to Q4 2019 due to a lack of inconsistent data.

Yield rate differences between White and Black demographic groups remain within 6 percentage points since 2019 for supervision searches. We are unable to conduct an analysis prior to Q4 2019 due to a lack of inconsistent data.

The 1,804 total searches conducted in Q4-2020 were categorized below. Many of these incidents have more than one cause for search and are included in multiple categories.

- Consent Only Searches: 124 (7%)
- Supervision Searches: 905 (50%)
- Other Searches: 1,232 (68%)

Total yield rate for all searches was 38% in Q4-2020. The yield rate was 28% for “consent only” searches, 49% for “supervision searches”, and 40% for “other searches.”

USE OF FORCE

Since the 1st quarter of 2016, total uses of force have decreased by 65% (952 to 335). More specifically, pointing of a firearm has decreased by 75% (648 to 160).

During the 4th quarter of 2020, the Department responded to 148,409 total calls for service. Department officers were assaulted 50 times and force was used in 174 incidents which represented 0.12% of all calls for service. Of those 174 incidents, force was used 335 times by 220 officers against 201 subjects. **There were two Officer Involved Shooting Use of Force incidents during the 4th quarter of 2020, and one of them resulted in death.**

Use of Force

38% of the total uses of force were against Black/ subjects, and 27% were against White, and Hispanic/Latino subjects. While overall uses of force continue to decline, the proportion of those uses of force against all demographic groups has remained relatively constant.

Race/Ethnicity	Uses of Force Q4-2019 (n=420)	Uses of Force Q4-2020 (n=335)	%Δ from 2019
Asian	5%	4%	-1%
Black/African American	46%	38%	-8%
Hispanic/Latino	24%	27%	3%
White	21%	27%	6%
Other	4%	4%	0%

Use of Force

TYPES OF FORCE USED

Total Uses of Force decreased by 21% from the fourth quarter of 2019.

Pointing of a firearm, physical control, striking by object/fist, and OC (Pepper Spray) were the top four types of force used and account for 90% of total Uses of Force.

Uses of Force	Q4 2019	Q4 2020	% Change
Pointing of Firearms	185	160	-14%
Physical Control	150	93	-38%
Strike by Object/Fist	55	32	-42%
OC Spray	8	16	100%
Impact Weapon	14	11	-21%
ERIW	7	13	86%
Firearm	2	4	100%
Spike Strips	1	1	0%
Other	0	5	not calc
Total	422	335	-21%

USE OF FORCE RESULTING IN DEATH

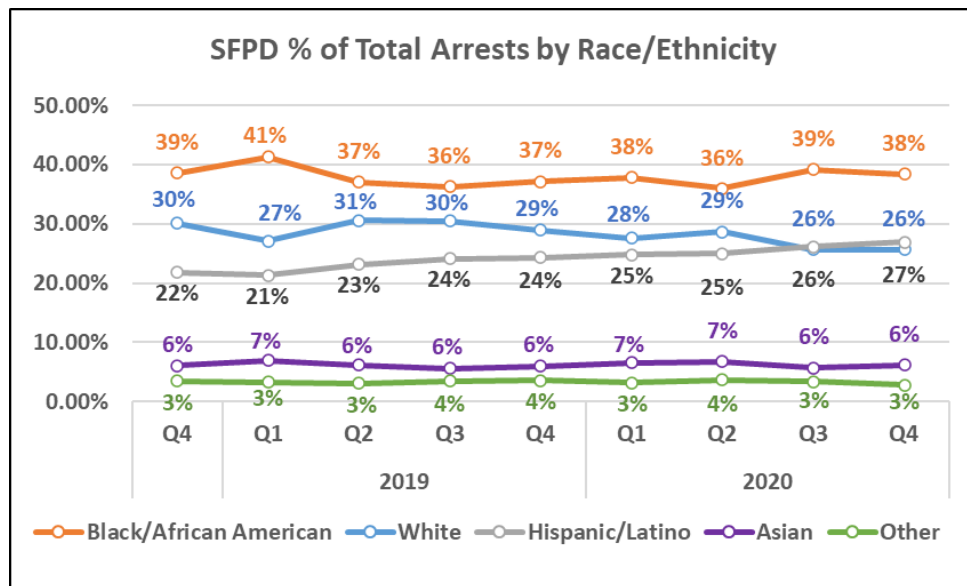

There were two Officer Involved Shooting (OIS) Use of Force incidents during the 4th quarter of 2020, and one of them resulted in death.

On Saturday, October 10, 2020 at approximately 11:26 PM officers responded to Market and Gough Streets regarding numerous 911 calls reporting a carjacking at knife point. Officers located the suspect and pursued him to the unit block of Otis Street where they attempted to detain him. During this contact, an officer involved shooting occurred, which was captured on the officers' body worn camera (BWC). The suspect was struck by gunfire and officers immediately rendered aid and summoned medics to the scene. The suspect succumbed to the injuries and was declared deceased at the scene. Officers located a knife at the scene of the officer involved shooting.

On November 17, 2020, at approximately 5:09 PM, San Francisco Police officers responded to 5th and Market Streets regarding male subjects in a fight. One of the subjects was reportedly armed with a knife. Officers arrived on scene and located a male who was brandishing a knife. During this contact an officer involved shooting occurred on the 800 block of Market Street. San Francisco Police officers deployed less-lethal weapons and a San Francisco Sheriff's Office deputy deployed a Taser. The suspect was taken into custody and transported to the hospital for a gunshot wound.

ARRESTS

There were 3,191 arrests during the Q4-2020, a 35% decrease from Q4-2019. White subjects accounted for 26% of all arrests, while Black subjects accounted for 38%.

Percentage of Total Arrests			
Race/ Ethnicity	Q4-2019 (n=4,946)	Q4-2020 (n=3,191)	%Δ from 2019
Asian	6%	6%	0%
Black/ African American	37%	38%	1%
Hispanic/Latino	24%	27%	3%
White	29%	26%	-3%
Unknown	4%	3%	-1%

A general decline in arrests over 2020 has not significantly changed the percentage makeup of individuals arrested in San Francisco.

* Detailed data regarding age groups and gender can be found later in this report.

ARRESTS BY DISTRICT

It's important to note that arrests made by Department members at San Francisco International Airport are investigated by, and reported as part of San Mateo County data and are not included in the City totals.

The “Outside SF/Other” category includes arrests made by Department members outside the jurisdiction of the City and County of San Francisco by the SFPD and arrests inside the City and County of San Francisco by agencies other than the SFPD that are captured by our Incident Reporting system.

Overall arrests made by Department members within the City and County of San Francisco jurisdiction declined in Q4-2020 compared to Q4-2019; however, Outside SF/Other arrests increased by 17%. A majority of this increase is due to increased arrests by other agencies operating within the City and County of San Francisco.

The quarter over quarter comparison is likely impacted by the COVID 19 shelter in place order and may explain some of the significant decline as compared to 2019.

District	Q4 2019	Q4 2020	% change
Co. A - Central	783	402	-49%
Co. B - Southern	688	437	-36%
Co. C - Bayview	367	338	-8%
Co. D - Mission	844	486	-42%
Co. E - Northern	433	334	-23%
Co. F - Park	256	112	-56%
Co. G - Richmond	169	127	-25%
Co. H - Ingleside	314	209	-33%
Co. I - Taraval	272	159	-42%
Co. J - Tenderloin	734	486	-34%
Outside SF/Other	86	101	17%
Total	4,946	3,191	-35%

DEPARTMENT OF POLICE ACCOUNTABILITY

The Department is required to obtain information from the Department of Police Accountability (DPA) relating to the total number of complaints received during the reporting period that it characterizes as allegations of bias based on race or ethnicity, gender, or gender identity. The Department also is required to include in its report the total number of complaints DPA closed during the reporting period that were characterized as allegations of bias based on race or ethnicity, gender, or gender identity, as well as the total number of each type of disposition for such complaints.

Cases Received in Q4-2020

Type of Case Received	# of Cases
Racial Bias	6
Gender Bias	1
Both Racial and Gender Bias	0
TOTAL	7

DPA received a total of 168 overall complaints for the quarter. Of those, 7 included allegations of bias (above), involving 15 officers for racial bias. 33 total complaints received in 2020 involving racial or gender bias

Case Closures and Dispositions in Q4-2020

Type of Case	Sustained	Mediated	Unfounded	No Finding	Insufficient Evidence	Proper Conduct	Referral	TOTAL
Racial Bias	0	1	4	2	2	0	0	9
Homophobic Bias	0	0	1	0	0	0	0	1
TOTAL	0	1	5	2	2	0	0	10

Closures include cases received in previous quarters.

BIAS-RELATED COMPLAINTS RECEIVED BY SFPD, AND INVESTIGATED BY THE DEPARTMENT OF HUMAN RESOURCES

As part of the Department’s commitment to transparency, the Department also reports on all bias-related complaints received by the Department and forwarded to the Department of Human Resources (DHR) for investigation. Closed cases may include complaints received in previous quarters. Bias-related complaints are referred to as Employment Equal Opportunity (EEO) cases by DHR.

Q4-2020 Bias Cases Received

EEO Cases Received	Q4-2020
Age / Race / Religion and Gender Discrimination	0
Disability Discrimination	1
Hostile Work Environment	4
Gender Discrimination	2

Source: SFPD Risk Management EEO Quarterly Report

Domestic Violence and COVID-19

Summary of Observations

- Economists at Brigham Young University conducted a study on COVID and Domestic Violence (DV) in 15 metro areas found an increase in calls to 911 for DV by 10.2% from March to May 2020. This increase is adjusted to 7.5% when taking things like seasonality into account.
- During the same timeframe, DV calls in San Francisco rose by 1,586 to 1,662. (4.79%).
 - o Based on geographic data, calls from repeat victims increased from 1,061 to 1,079 (1.1%) while calls from new victims increased from 525 to 583 (11.05%)
- SFPD's Special Victims Unit conducted specific outreach to known victims of domestic violence in May and June 2020.
- The Department of Emergency Management, who dispatch 911 calls, also initiated a text to 911 program in early April 2020.
- DV calls to 911 in San Francisco declined from 6,197 in 2019 to 5,897 in 2020, a reduction of 4.84%.
- We are unable to specifically cite a cause for year-over-year reduction in San Francisco; however, the work of SFPD's SVU and DEM's text to 911 program may have been a contributing factor.

Introduction

The COVID-19 pandemic raised questions currently being studied by various academic institutions regarding the effects of stay-at-home orders on domestic violence. Domestic violence, or intimate partner violence, is committed by a spouse or partner in an intimate relationship against the other spouse or partner. Several of the underlying contributing factors of domestic violence have been exacerbated during the pandemic. There are additional economic and emotional stresses combined with the necessity of remaining in close quarters more often and during new situations, such as working from home and extended school closures. While staying at home may, in some cases, mean neighbors are also home and potentially able to hear and report a domestic disturbance, it also means victims may be separated from friends and family who could help, and victims may have a more difficult time reporting abuse while the perpetrator remains in the home.

Assistant Professor of Economics at Brigham Young University (BYU), Emily Leslie and co-author Riley Wilson documented their findings of the impact of COVID-19 on police calls for service for domestic violence in a paper published May 19, 2020 titled “Sheltering in Place and Domestic Violence: Evidence from Calls for Service during COVID-19.”³ This study focused on 15 large metropolitan areas, of which San Francisco was not included, and uses cell phone tracking data collected by various private companies, trends in Google searches, and Open Table restaurant data for number of diners eating out. The study concentrated on the time period of January 5, 2020 through the end of March, and notes the pandemic began affecting human behavior by the week of March 9, 2020. Domestic violence calls for service began increasing in the 15 studied areas at this time, as people were beginning to spend more time at home in response to public health orders and guidance on COVID-19. The study concluded that the COVID-19 pandemic and subsequent shelter-in-place orders are associated with a rise in domestic violence service calls, primarily driven by new households experiencing this crime type. A podcast discussing the paper can be listened to for additional context⁴.

The study found an increase of 10.2% calls for service to 911 for domestic violence across the study population, but further refined the estimate by accounting for, among other things, seasonality. These statistical changes are summarized on the website presenting the paper as: “The pandemic increased domestic violence calls by 7.5% during March through May of 2020, with effects concentrated during the first five weeks after social distancing began.”⁵

We undertake an exploration of these data to see if domestic violence trends in San Francisco, measured by calls for service to 911, track with the 15 other study participants trends. We also look at other interventions conducted in San Francisco by the San Francisco Police Department (SFPD) and the Department of Emergency Management (DEM) to see if we are able to notice an effect in our overall number of calls for service.

Domestic Violence in San Francisco and COVID 19

The SFPD study below is a data exploration on data trends and general observations and conducts a surface level data exploration on the incidents of domestic violence in San Francisco. Below is a chart depicting the first 23 weeks of the year for domestic violence calls for service in San Francisco, during 2018, 2019, and 2020. According to the aforementioned study, the pandemic news began influencing people to stay at home

during week 11 of 2020 on the chart below. Mayor Breed issued the first order prohibiting large events and public gatherings at the end of week 10 (March 7, 2020), and issued a second order during week 12 (March 17, 2020), directing residents to shelter in place, except for essential business purposes.

While the rise in calls is consistent with seasonal trends, there is an additional increase in the amount of domestic violence calls received between March and May of 2020 in San Francisco, which occurred while there was an overall decrease in calls for service for other types of crime.

Domestic Violence Calls for Service – March through May

	2018	2019	2020	2018 vs. 2020	2019 vs. 2020
March	530	501	509	-3.96%	1.60%
April	536	548	584	8.96%	6.57%
May	540	537	569	5.37%	5.96%
3 Month Total	1,606	1,586	1,662	3.49%	4.79%

We observe that San Francisco calls for service for domestic violence increased 4.79%, when comparing against the same months during 2019, which is less than the 10.2%

unadjusted, or 7.5% adjusted, increase reported in the BYU study. The San Francisco increase is inclusive of seasonal changes observable when compared against the same time period in the previous year. As the BYU study notes, there are seasonal increases in violent crimes and domestic violence that correspond to warming temperatures.

However, when looking at the number of domestic violence calls received over the year during 2020 in San Francisco, the number of calls has declined, primarily between August and November. The BYU study does not provide a longer-term perspective or longitudinal study, as it was published in May of 2020 and such additional data was not available.

SFPD and Department of Emergency Management Interventions

SFPD initiated a specific intervention with known survivors of domestic violence in May and June of 2020. This intervention was conducted largely after the time period considered in the BYU paper; it may be instructive to consider the intervention in the context of a full year of data. To help mitigate the potential impacts of staying at home on domestic violence victims SFPD's Special Victims Unit (SVU) reached out to 314 survivors of domestic violence during the months of May and June 2020 who were potentially at risk of being re-victimized. At-risk survivors were identified from those who had been victimized two or more times over the previous 18 months. While some of the survivors could not be reached due to invalid contact information, 118 voice messages were left advising that SFPD SVU was available to answer questions and offer referrals for support through domestic violence advocacy services, and 101 survivors

were successfully contacted, with 66 receiving referrals to victim support services and 35 declining services. Additionally, in early April 2020, San Francisco Department of Emergency Management began offering the ability to text 911 for help, which could support victims that are unable to speak on the phone. Data beyond the start data of the program was not available at the time for inclusion in this study.

Analysis of Domestic Violence Trends thru 2020

Using data available to the San Francisco Police Department, we analyzed Calls for Service—311 or 911 calls generated through the Department of Emergency Management’s deployment system. The data describes how many calls for domestic violence were received at locations that had a previous domestic violence call for service (a repeat location) vs a location that did not (a new location). Calls were considered as duplicates if the geographic coordinates for the call were associated with more than one unique domestic violence call number between January 1, 2018, and December 31, 2020.

Each intervention could affect the new versus repeat data differently – for example – if the SFPD’s SVU outreach was extremely effective, we could expect to see a noticeable decline in the number of repeat domestic violence calls for service, as compared to new domestic violence calls for service, which did not receive this intervention.

Alternatively, the Department of Emergency Management’s text for help outreach was announced publicly, could have confounding effects, but for both sets of callers. That is, if the public outreach was especially effective, we could expect to see an increase of domestic violence calls for service (or in this case, texts) for both new and repeat callers, as the intervention was public and available to both groups.

We observe domestic violence calls for service at new locations in San Francisco did increase during the time of March through May; however, calls for service declined at new and repeat locations during 2020, primarily during the latter half of the year.

Domestic Violence Calls in San Francisco – March through May

Domestic Violence Calls for Service	2018	2019	2020	% Change 2019 vs 2020 March through May
New Location	591	525	583	11.05%
Repeat Location	1,015	1,061	1,079	1.70%
Grand Total	1,606	1,586	1,662	4.79%

Domestic Violence Calls in San Francisco – July through December

Domestic Violence Calls for Service	2018	2019	2020	% Change 2019 vs 2020 July through Dec
New Location	1,203	1,106	942	-14.83%
Repeat Location	2,111	1,970	1,871	-5.03%
Grand Total	3,314	3,076	2,813	-8.55%

Domestic Violence Calls in San Francisco – January through December

Domestic Violence Calls for Service	2018	2019	2020	% Change 2019 vs 2020 January through Dec
New Location	2373	2158	2017	-6.53%
Repeat Location	4,123	4,039	3,880	-3.94%
Grand Total	6,496	6,197	5,897	-4.84%

Conclusions

At the time of this report, reduction in domestic violence calls during 2020 cannot be attributed to a specific factor; however, potential causes include the results of successful outreach and support services received by victims, increased ability to contact 911 through text, contrasted by a reduced ability for victims to report abuse while sheltering in place with an abuser, and a reported decline in the SF population due to various economic factors. Other factors may also influence these data and are not captured or mentioned in this analysis.

Future research may wish to consider these questions:

- What were the seasonal effects on domestic violence calls for service in San Francisco, and how would adjusting for seasonality effect increases or decreases reported here?
- What were the effects, if any, of the outreach by the SFPD's SVU on domestic violence trends in calls for service? What were the effects of the new DEM text to 911 program?
- What is driving the reduction in domestic violence calls over the second half of 2020?

Population Benchmark Analysis, Per Capita Race/Ethnicity, 2020

The San Francisco Police Department received requests from various community key stakeholders to present a Per Capita population benchmark analysis. This analysis captures an interaction with a particular race or ethnicity, as compared to their representation, per 1000 individuals, in San Francisco's residential population. This analysis presents quarter four data and all quarters with data available. A disparity analysis-the contrast between different race/ethnicity groups against each other- is also shown in order to generate a numerical comparison. This analysis may surface potential racial disparities when comparing policing activities with the various demographic groups. In all cases, a population benchmark analysis that presents results per capita will continue to retain challenges that any population benchmark may have, and are noted below.

What is a benchmark?

A benchmark is a common frame of reference, created by comparing at least two sets of data to each other, in order to consider trends presented in the data and provide context to the data. In this analysis, we compare citywide population demographics against pre and post stop activities by SFPD, and then convert those contact ratios into a Per Capita (or by 1000 residents) number.

Population Benchmark Weaknesses

As noted by the California Department of Justice in their RIPA 2021 report, "An assumption of this type of comparison is that the distribution of who is stopped would be similar to who resides within a comparable geographic region. However, this is not always the case, as people may travel a considerable distance from where they live for a number of reasons (e.g., to go to work, visit family).⁶" The assumption that who is included in police data should match the local residential population makes several assumptions that are not addressed in this analysis, and may reduce or increase comparative disparities noted in the analysis.

Comparing against residential population does not account for individuals who travel outside their home residential district in the residential population count, potentially causing over or under representation in the data⁷. For example, in 2019 approximately

⁶ [2021 RIPA Board Report - Racial and Identity Profiling Advisory \(RIPA\) Board \(ca.gov\)](#) Pp46

⁷ <https://oag.ca.gov/sites/all/files/agweb/pdfs/ripa/ripa-board-report-2020.pdf> pp26-27

19% of individuals booked or cited by the Department have home residences outside of SF. Should that proportion of non-SF residents continue to appear in the data, their presence may cause an overestimation or underestimation of disparities in the analysis.

Residential population demographics (in this case, Census ACS data) are categorized differently than SFPD and RIPA data standards.

When Racial & Identity Profiling Act (RIPA) board data is used, it is perceived demographic data being compared to self-reported demographics in the residential population data.

“Population counts generally overestimate bias in stop decisions, as differences in poverty, education, and labor market opportunities vary across identity groups in the U.S. Because education and employment affect criminal behavior, disparities along these dimensions will lead to disparities in who commits crime. In this way, pre-existing social disparities will tend to make the fraction of Black or Latinx people in the population smaller than the fraction of Black or Latinx people who are potentially subject to being stopped, overestimating any bias in a stop decision.⁸”

Despite these known limitations in working with population data within a benchmark, it does not mean analysis using a population benchmark is invalid. They should, however, be kept in mind when interpreting results of any population benchmark. Results of population benchmarks can inform future analysis’ and provide insight into potential disparities, trends and differences between SFPD districts.

Population Benchmark Strengths

A key benefit in using a population data benchmark is the intuitive ease of understanding as compared to other benchmarks. Other benchmarking techniques can utilize univariate or multivariate statistical analysis that can be hard to explain succinctly and can quickly become overwhelming.

What did we do?

The SFPD took a citywide demographic dataset, generated by the US Department of Justice analysis in 2016, to serve as a population benchmark⁹. The percentage demographic representation in various data, and generated a per capita (per 1000 residents) count along with a table and graph for each activity. Data used for

⁸ <https://www.capolicylab.org/wp-content/uploads/2020/10/RIPA-in-the-LAPD-Summary-Report.pdf> pp12-13

⁹ http://sfpd.prod.acquia-sites.com/sites/default/files/2018-11/DOJ_COPS%20CRI_SFPD%20OCT%202016%20Assessment.pdf pp 296-297

comparison to the population benchmark and per capita calculation was gathered during the fourth quarter of 2020 (September 1, 2020 – December 31, 2020) for Q4 analysis. All available data was used for the historical per capita analysis, reaching back to either 2016 or the second half of 2018, depending on the dataset.

Then, all available prior year data was compared with overall trends per capita against types of SFPD activity, by demographic group.

Finally, we conduct a disparity analysis by comparing per capita demographic data for certain groups against each other to determine if disparate treatment may be occurring.

Specific Methodology Notes

In addition to the general challenges of a population benchmark, noted above, the SFPD would like to highlight the additional methodological notes for clarity and context.

- Census/ACS data considers “Hispanic” as an ethnicity, while the suspect, stops, searches, uses of force, and arrest data considers “Hispanic” as a race.
- Suspects per District: Crime Data Warehouse was searched for persons categorized as “Suspects” on police incident reports. Suspect demographic information may be developed from calls for service or it may be developed at a subsequent point during investigation of an incident. All police incident reports (initial or supplemental) having a date value are included. Suspects with unknown race values are not included. While some suspects are subsequently arrested, and also listed as “booked” or “cited” on police incident reports, this category is not intended to include arrestees.
- Stops information provided reflects entries into the Stop Data Collection System (SDCS), a data collection tool provided by the California Department of Justice to assist departments in complying with AB953 and the RIPA Board’s data collection requirements. Stops information with regard to demographic data are perceptive data.
- Searches information provided reflects entries into the SDCS, with the same caveats as above.
- Uses of Force information provided reflects entries into the Department UoF Database and account for a distinct count of uses of force force, broken down by District and Race of Subject on Whom Force was Used.
- Arrests: Persons “booked” and “cited” where an incident report (initial or supplemental) had a date value.

Quarter Per Capita Interactions

Using the previously mentioned methodologies, SFPD finds that Black individuals overrepresented per capita in all interactions with the SFPD.

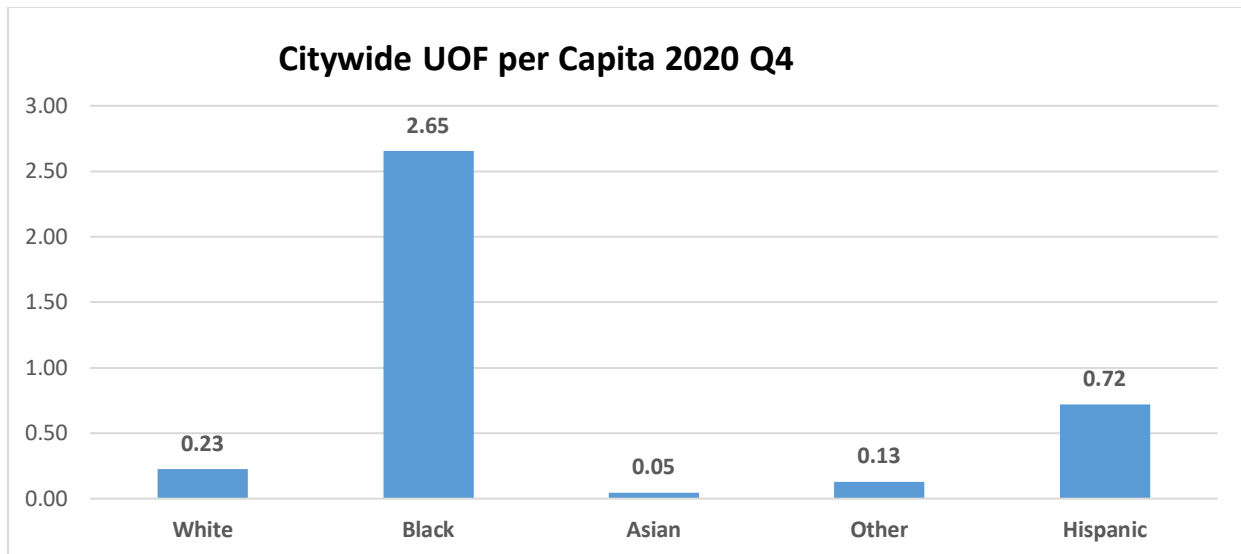

Citywide suspect data shows in Q4 of 2020, 59.62 of every 1000 Black residents of San Francisco may be reported as a suspect to a crime, as compared to 3.41 of every 1000 White residents.

Citywide suspect data shows in Q4 of 2020, 42.50 of every 1000 Black residents of San Francisco may be stopped, as compared to 5.90 of every 1000 White residents.

Citywide search data shows in Q4 of 2020, a 15.09 of every 1000 Black residents of San Francisco may be searched as part of another interaction with the SFPD, as compared to 1.20 of every 1000 White residents.

Citywide Use of Force data shows in Q4 of 2020, 2.65 of every 1000 Black residents of San Francisco may be subject to a use of force, as compared to .23 of every 1000 White residents.

Citywide arrest data shows in Q4 of 2020, 25.62 of every 1000 Black residents of San Francisco may be stopped, as compared to 2.01 of every 1000 White residents.

Q4 Quantitative Analysis

Per Capita Population Benchmark

Per Capita Interactions by Race

We further conducted an analysis using the above methodology across all quarters from which we have useful data. In this case, starting in Q1, 2016 for Arrests, Uses of Force and Suspect data, and 2018 for Stops and Searches. We find that Black demographic group are overrepresented, per capita, in every interaction. We further find that these interactions with the Black demographic group have declined over time. Data labels and trend lines for the most impacted group(s) are included for context and clarity.

Citywide suspect data shows since 2016, between a low of 59.9 and a high of 100 per1000 Black residents of San Francisco may have been reported as a suspect to a crime, significantly higher than the ‘other’ demographic category, with a high of 31.5 and low of 11.3 ‘other’ residents per 1000. There has been a slight decline over time, on average, of the per capita inclusion of Black residents within suspect reporting.

Race	Slope
Black	-0.570
Asian	-0.023
Hispanic	-0.062
White	-0.033
Other	-0.702

A linear trendline is produced for the most impacted group. Slopes for all trendlines are added in table 2 to allow for comparison. Slope represents the average change, per demographic group, per quarter. In this case the number of Black individuals included in suspect data goes down .6, per 1000 Black residents, per quarter, on average, over time.

Citywide vehicle and pedestrian stop data shows since mid-2018, between a low of 40.9 and a high of 160.3 per 1000 Black residents of San Francisco may have been stopped, significantly higher than the Hispanic demographic category, with a high of 43.9 and low of 10.3 Hispanic residents per 1000. There has been a significant decline over time, on average, of the per capita number of Black residents stopped in a vehicle or pedestrian stop since mid-2018.

Race	Slope
Black	-14.525
Asian	-1.302
Hispanic	-4.165
White	-2.506
Other	-2.931

A linear trendline is produced for the most impacted group. Slopes for all trendlines are added in table 2 to allow for comparison. Slope represents the average change, per demographic group, per quarter. In this case the number of Black individuals included in stops data goes down 14.5, per 1000 Black residents, per quarter, on average, over time.

Citywide search data shows since mid-2018, between a low of 13.1 and a high of 46.1 of every 1000 Black residents of San Francisco may have been searched, significantly higher than the Hispanic demographic category, with a high of 9.3 and low of 3.1 Hispanic residents per 1000. There has been a significant decline over time, on average, of the per capita number of Black residents searched since mid-2018.

Race	Slope
Black	-3.800
Asian	-0.113
Hispanic	-0.755
White	-0.294
Other	-0.145

A linear trendline is produced for the most impacted group. Slopes for all trendlines are added in table 2 to allow for comparison. Slope represents the average change, per demographic group, per quarter. In this case the number of Black individuals included in search data goes down 3.8, per 1000 Black residents, per quarter, on average, over time.

Citywide Use of Force data shows since 2016, between a low of 2.7 and a high of 9.4 of every 1000 Black residents of San Francisco may have been subject to a Use of Force, significantly higher than the Hispanic demographic category, with a high of 2.1 and low of .6 Hispanic residents per 1000. There has been a significant decline over time, on average, of the per capita number of Black residents upon whom use of force has been used since 2016.

Linear Trendline Slope UoF Per Capita	
Race	Slope
Black	-0.327
Asian	-0.010
Hispanic	-0.644
White	-0.017
Other	-0.005

A linear trendline is produced for the most impacted group. Slopes for all trendlines are added in table 2 to allow for comparison. Slope represents the average change, per demographic group, per quarter. In this case the number of Black individuals included in UoF data goes down .32, per 1000 Black residents, per quarter, on average, over time.

Citywide arrest data shows since 2016, between a low of 25 and a high of 47.7 of every 1000 Black residents of San Francisco may have been subject to arrest, significantly higher than the Hispanic demographic category, with a high of 10.6 and low of 6.6 Hispanic residents per 1000. There has been a modest decline over time, on average, of the per capita number of Black residents arrested since 2016.

Race	Slope
Black	-0.962
Asian	-0.028
Hispanic	-0.088
White	-0.008
Other	-0.101

A linear trendline is produced for the most impacted group. Slopes for all trendlines are added in table 2 to allow for comparison. Slope represents the average change, per demographic group, per time quarter. In this case the number of Black individuals included in Arrest data goes down .32, per 1000 Black residents, per quarter, on average, over time.

Yearly Per Capita Disparity Analysis

We further conduct a disparity analysis by baselining the 3 most represented demographics against each other to find a numerical representation of the disparity between groups, per SFPD interaction, per year. As with the other per capita analysis', Black residents of San Francisco have higher rates of disparity in the data as compared to the White and Hispanic demographics in the data.

Citywide suspect data shows that since 2016, Black residents are between 19.3 to 19.9 times more likely to be listed as a suspect, than White residents. This trend has remained essentially flat since 2016.

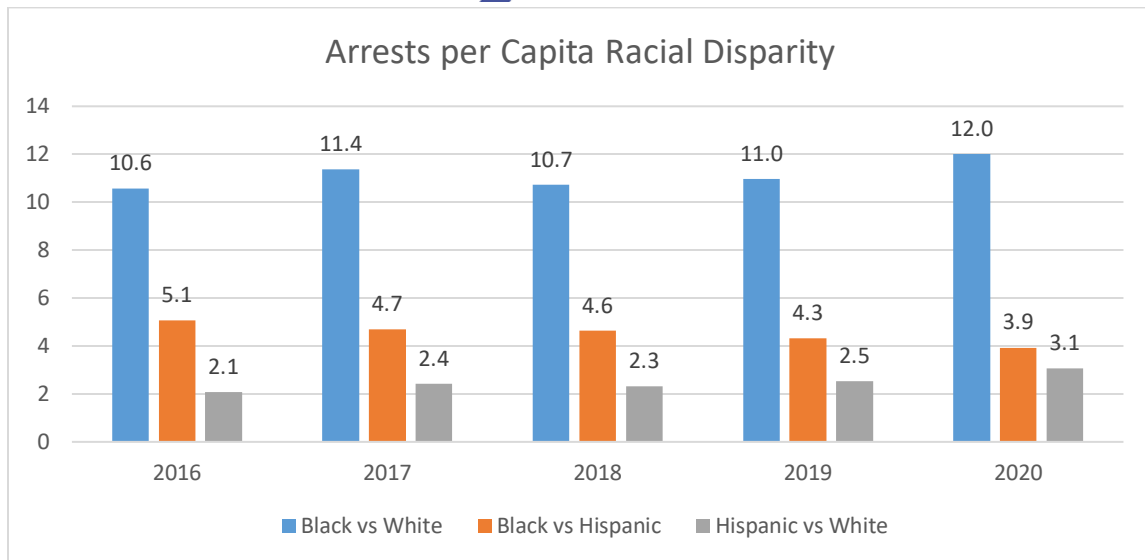

Citywide vehicle and pedestrian stop data shows that since mid-2018, Black residents are between 6.2 and 6.7 times more likely to be stopped than White residents. This trend has on average increased since the second half of 2018.

Citywide search data shows that since mid-2018, Black residents are between 12.1 and 10.8 times more likely to be stopped than White residents. This trend has on average decreased since the second half of 2018.

Citywide search data shows that since mid-2018, Black residents are between 16.7 to 12.4 times more likely to have force used upon them than White residents. This trend has on average decreased since the second half of 2018.

Citywide arrest data shows that since 2016, Black residents are between 12 to 10.6 times more likely to be arrested than White residents. This trend has on average increased since 2016.

What did we find?

We found that Black residents are significantly more involved in various SFPD enforcement activities more often than their representation in the population, especially when compared to White residents.

These findings provide context around who is involved with the SFPD at various points of activity, but does not answer the question of ‘why’ this is the case.

It is possible that some or all of the factors discussed in the benchmark description section, above, are affecting the data in some way, or that other factors, to include officer bias, is at work, or an entirely different unknown factor is at hand and is affecting these analysis’.

The context provided gives us a common frame for conversation, mutual understanding, and a jumping off point from which additional analysis may occur.

What’s next?

The Department looks forward to continuing analysis of data quarterly. More in-depth analysis includes using different benchmarks to more accurately reflect the population of individuals involved with the SFPD, using tests to include discovery/hit rate analysis,

Q4 Quantitative Analysis

Per Capita Population Benchmark

'Veil of Darkness', and multivariate analysis. Due to the complexity of some of these analysis', the SFPD may require time to build analytic capacity before attempting.

The SFPD has also partnered with multiple academic entities to assist in academic level analyses of SFPD data, to include the California Policy Lab at UC Berkeley and UC Los Angeles, Stanford's SPARQ center, Palo Alto University and Policing Equity, Inc.

SFPD Quarterly Activity & Data Report

In Q4-2020, there were a total of 7,132 stops; a 74% decrease from Q3-2019. Of those stops, 1,804 (25%) resulted in searches.

Total Stops Oct 1 - Dec 31, 2020					Total Searches Oct 1 - Dec 31, 2020				
Type of Stops	Oct	Nov	Dec	Total	Type of Stops	Oct	Nov	Dec	Total
Dispatched	786	755	770	2,311	Dispatched	321	349	345	1,015
Self-Initiated	1,549	1,837	1,435	4,821	Self-Initiated	263	280	246	789
Total Stops	2,335	2,592	2,205	7,132	Total Searches	584	629	591	1,804

For purposes of Admin Code 96A.4, the Department utilizes the SDCS program definitions under AB953; a 'stop' is defined as 1) any detention, as defined in regulations, by a peace officer of a person or 2) any peace officer interaction with a person in which the officer conducts a search as defined in regulation.¹⁰ Stops include Traffic Stops and Pedestrian Detentions. Stops may be Self-Initiated or Dispatched.

**3 Stops during Q4 resulted in contact with the Department of Homeland Security or its subordinate organizations. Two contacts occurred at the San Francisco International Airport, one involved an incident reported to SFPD that occurred on an aircraft, which is under the jurisdiction of the TSA, necessitating contact. The other involved an individual identified by Customs and Border Protection informing SFPD of an individual with a warrant, necessitating contact. The final contact was a typographical error and the stop in question did not involve DHS or its subordinate agencies.*

Calls for Service, Q4 2020

The Department responded to 148,409 total calls for service during 4th quarter of 2020. Call count declined each month thru the quarter.

Dispatching changes occurred in November 2020 to account for the implementation of the Street Crisis Response Team, which began responding to certain calls in lieu of the SFPD. SCRT responded to 184 calls for service in November and December, 2020.

Calls for Service October 1 - December 31, 2020			
Oct	Nov	Dec	Total - Q4
53,723	48,958	45,728	148,409

Data Source: San Francisco Police Department CAD

SUSPECTS OBSERVED AND/OR REPORTED TO SAN FRANCISCO POLICE DEPARTMENT

Suspect information/description is either provided by a member of the public reported directly to the police or through dispatch, or is observed by a Department member during a self-initiated call for service in which there is reasonable suspicion or probable cause for a crime. The suspect information is documented in a police incident report that is generated from the call for service.

The following table summarizing suspect descriptions gathered from incident reports shows that 40.9% of the subjects reported to police, directly or through dispatch, or those observed by a member during a self-initiated contact are Black/African American.

SUSPECTS by Race/Ethnicity October 1, 2020 - December 31, 2020					
DESCRIPTION	Oct	Nov	Dec	Q4 2020	% of Total Suspects Q4 2020
Asian/ Pacific Islander	118	93	81	292	4.2%
Black/ African American	959	941	952	2852	40.9%
Hispanic/ Latino	415	335	377	1127	16.2%
Native American	8	13	3	24	0.3%
White	487	429	471	1387	19.9%
Others	405	460	419	1284	18.4%
Total	2,392	2,271	2,303	6,966	100.00%

Note: Suspect data is extracted from incident reports via the Person Schema of Crime Data Warehouse via Business Intelligence tools. Search criteria includes results in which Person Type = "Suspect." Records with Unknown Race/Ethnicity data are not included.

Use of Force, Q4 2020

Total Use of Force Overview January 1, 2016 through December 31, 2020

The above chart shows the decrease in Use of Force since the 1st quarter of 2016 by 65%. There were 952 Uses of Force in 1st quarter of 2016 compared to 335 Uses of Force in 4th quarter of 2020.

Use of Force, Q4 2020

Total Use of Force Overview by Subject Race/Ethnicity

During 4th quarter of 2020, 38% of the total Uses of Force were against Black subjects, 27% were against White subjects, and 27% were against Hispanic/Latino subjects.

Fourth Quarter Comparison – Uses of Force – 2019 vs. 2020

Total Uses of Force
Fourth Quarter Comparison - 2019 vs 2020

	2019	2020	% Change
Oct	131	159	21%
Nov	164	87	-47%
Dec	127	89	-30%
Q4 Total	422	335	-21%

There were 335 Uses of Force in 4th quarter of 2020, a 21% decrease in comparison to the Use of Force in 4th quarter of 2019.

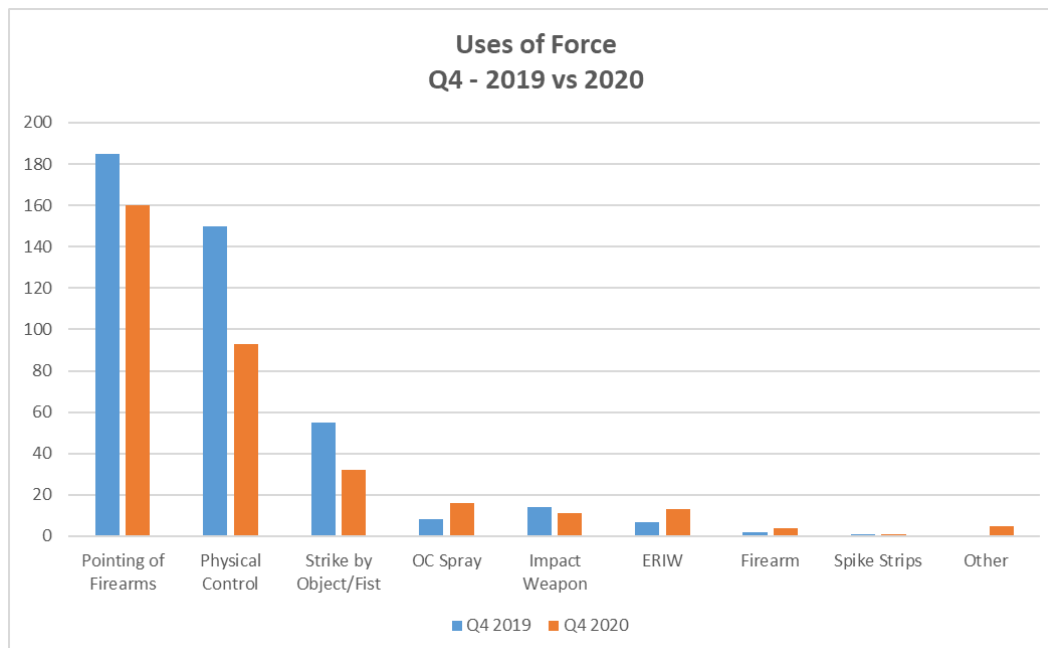

Use of Force, Q4 2020

Total Uses of Force by Force Type

Fourth Quarter Comparison – 2019 vs. 2020

During 4th quarter of 2020, pointing of a firearm, physical control, striking by object/fist, and OC (Pepper Spray) were the top four types of force used and accounted for 90% of total Uses of Force.

Uses of Force	Q4 2019	Q4 2020	% Change
Pointing of Firearms	185	160	-14%
Physical Control	150	93	-38%
Strike by Object/Fist	55	32	-42%
OC Spray	8	16	100%
Impact Weapon	14	11	-21%
ERIW	7	13	86%
Firearm	2	4	100%
Spike Strips	1	1	0%
Other	0	5	not calc
Total	422	335	-21%

A review of all reported uses of force during Q4 2020 found no instances of officers discharging firearms at a moving vehicle, nor any instances where the carotid restraint was employed.

SEC. 96A.3 (b) (2) USE OF FORCE RESULTING IN DEATH

SEC. 96A.3 (b) (2) USE OF FORCE RESULTING IN DEATH TO THE PERSON ON WHOM AN OFFICER USED FORCE;

There were two Officer Involved Shooting (OIS) Use of Force incidents, one of them resulting in death during the 4th quarter of 2020. The Officer Involved Shooting resulting in death occurred on October 10, 2020. The Officer Involved Shooting not resulting in death occurred on November 17, 2020. See pages 18-19 for details.

Officers Assaulted by Month

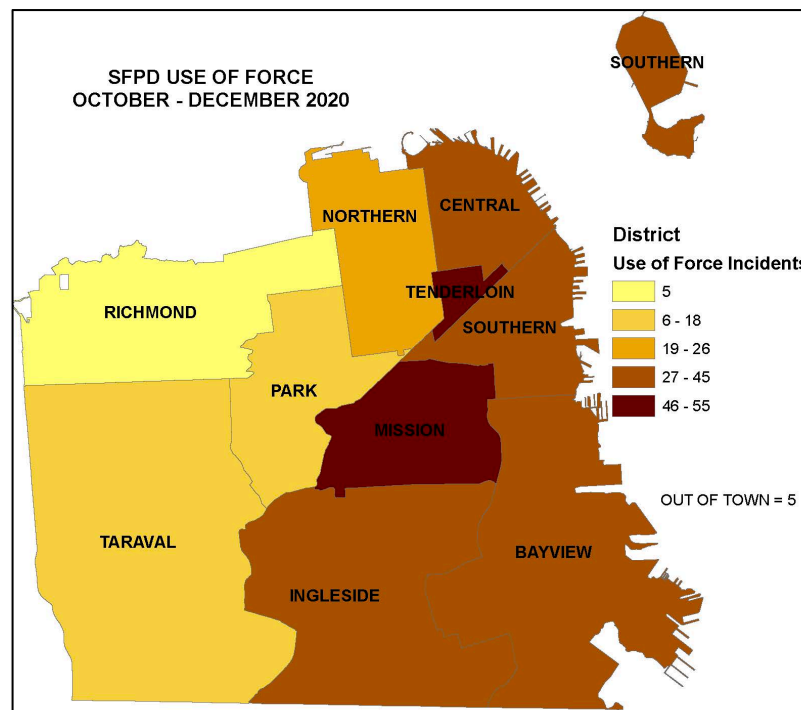

October - December 2020

In Q4-2020, there were a total of 47 officers assaulted; a 16% decrease from Q4-2019.

Officers Assaulted by Month			
	2019	2020	% Change
October	22	31	41%
November	14	3	-79%
December	20	13	-35%
Total	56	47	-16%

The Central District (13) had the highest number of officers assaulted, followed by Southern (8), Bayview (7) Mission (6) and Tenderloin (6). The Mission District (55) had the highest number of Uses of Force, followed by Tenderloin (53) and Southern (45).

SEC. 96A.3 (b) (1) Types of Force by Race/Ethnicity and Gender of Subject October – December 2020

During 4th quarter of 2020, Uses of Force used against Black Male subjects accounted for 32%, White Male subjects accounted for 26% and Hispanic Male subjects accounted for 25% of number of Uses of Force used.

The Department is required to obtain information from the Department of Police Accountability (DPA), formerly the Office of Citizens Complaints, relating to the total number of complaints for the reporting period received by DPA that it characterizes as allegations of bias based on race or ethnicity, gender, or gender identity. The Department also is required to include in its report the total number of complaints DPA closed during the reporting period that were characterized as allegations of bias based on race or ethnicity, gender, or gender identity, as well as the total number of each type of disposition for such complaints.

Allegations of Bias based on Race or Ethnicity, Gender, or Gender Identity

Cases Received in Q4-2020

Type of Case Received	# of Cases
Racial Bias	6
Gender Bias	1
Both Racial and Gender Bias	0
TOTAL	7

15 Officers were named for allegations of racial or gender bias
DPA received 168 total cases for the quarter, including above.

There were a total of 33 cases received in 2020 involving racial or gender bias.

DHR Investigated Complaints of Bias

BIAS-RELATED COMPLAINTS RECEIVED BY SFPD, AND INVESTIGATED BY THE DEPARTMENT OF HUMAN RESOURCES

As part of the Department’s commitment to transparency, the Department also reports on all bias-related complaints received by the Department and forwarded to the Department of Human Resources (DHR) for investigation. Closed cases may include complaints received in previous quarters. Bias-related complaints are referred to as Employment Equal Opportunity (EEO) cases by DHR.
